INTRODUCTION

As per the scheme in the Term-I of Academic year 2022-2023

I have to complete a course titled **Community Development Project** with any “Local Non-Government Organizations” under the aegis of Division of student welfare (Lovely Professional University).

I Tauheed Prolta, Registration number: 12110133 opted to go with any local organization and NGO to complete this task. As my interest, objective and NGO's goals are similar, I have joined **Lions Club Organization** for **one month**.

As a part of Lions Club, I have learned so many new things about environment, needs of human being, etc. and through this I have built a strong network, after joining the NGO I get familiar with many new things and daily life practices, So in this report I have mentioned everything that I learned and practiced.

About LIONS CLUB ORGANIZATION:

Our Motive:

As Lions, we hold ourselves to the absolute highest standards in everything we do. Our members and clubs are dedicated to serving others, and it shows. We champion kindness in our communities and actively work to improve the lives of all people.

Our Purpose:

- To Organize, charter and supervise service clubs to be known as Lions clubs.
- To Coordinate the activities and standardize the administration of Lions clubs.
- To Create and foster a spirit of understanding among the peoples of the world.
- To Promote the principles of good government and good citizenship.
- To Take an active interest in the civic, cultural, social and moral welfare of the community.
- To Unite the clubs in the bonds of friendship, good fellowship and mutual understanding.
- To Provide a forum for the open discussion of all matters of public interest; provided, however, that partisan politics and sectarian religion shall not be debated by club members.
- To Encourage service-minded people to serve their community without personal financial reward, and to encourage efficiency and promote high ethical standards in commerce, industry, professions, public works and private endeavours.

PROBLEM IDENTIFICATION and CAUSE OF THE PROBLEM

There was a local park near to my colony which is built by the government authorities for the people, but that area is a developing area and lots and lots construction work was going on so in that park there was very less greenery and only 6-7 trees were planted in that park, so me and my friends decided to do something about it. Since I have to join an NGO so I searched for NGO's regarding tree plantation and after searching we found a perfect NGO **LIONS CLUB INTERNATIONAL**. I talked to them about the situation and positively they agree for giving us certificates for "Contribution Towards Environment".

OBJECTIVES TO BE ACHIEVED

Major objectives to be achieved are:

- To make us interact with social activities happening near us.
- To plants trees so that the park looks much greener.
- To take care of the plants so that the damage done by construction may somehow recover.
- To influence more people so that a greater number of trees can be grown.
- To make us familiar with how a local organization/ NGO works.

STEPS TAKEN TO ACHIEVE OBJECTIVES

WEEK-1:

In week 1, I discussed this problem with my friends and we decided to start planting trees in the park near to my colony. For this I have called the NGO members for a visit to the park, they visited the park and completely analyses about that location and we together agreed for planting tree in that park. Now I have to start the work, So I have called all my friends and we went in the nursery to see the types of plants. After seeing all the plant, we have a good knowledge about plants which we humans need in the coming future.

Now, we finally bought so many plants from that nursery and placed all of them on a safe location near the park. This task has taken 3 Days.

Now from Day 4 onwards we started the process:

- First of all, we started taking care of the soil by giving water to the soil daily so that it will benefit the growth of the tree that will we are going to plant.
- Now I started connecting with the NGO members through Google meet, zoom like platforms So that I can have enough knowledge about the process of planting trees.
- Through this I came to know about all the tools we need for this task and I started collecting all the required

tools. Now after this all we are on a good stage to start plantation.

WEEK-2:

The week two comes with the responsibility of checking the plants as we had a lot of plants to take care of so we frequently visit the park and check if all is good or not. Watering the plants doesn't required much of our time as it was rainy season so rain helped us to water the plants. By the end of week two our work at the park was done the plants were doing great and problem of less plants was solved.

WEEK-3:

Week three was again a planting week but we were already done with the park. So, for the third week I ordered some seeds from Amazon and some bags to grow them, as it was also a part of plantation and I will gain experience about how a plant grows from a seed. I took three bags and bring soil from the construction site and fill the bags with soil and then watered it. In the next morning I again went to nursery with my dad and bring some Rose plants as he also started taking interest in the plantation work.

Then after reading the instruction from we sow Baby Spinach, Cabbage, Bottle Guard, Green and Red Capsicum seeds. The week ended in the seed sowing and their watering.

WEEK-4:

In the fourth week while I was taking care of the seeds I got a call from my friend he wants to plant some flowers in his backyard so I got my plantation idea for the fourth week.

At nursery we started our search for the flowers and found flowers

After getting experienced of planting trees, and seeds, planting seeds was not a big deal. With ease we planted all the flowers and decorated his garden.

And this is how I completed my Community Development Project, this project gave me a completely new experience, with experience I also faced a lot of challenge.

First was while planting the trees when I planting my first tree I didn't know that we must water the soil (in the plant bag) and when I take the plant out from the bag the soil dropped and I had to plant it in deep ground.

Second when the seeds were growing birds tried to eat those seeds so to protect it I used to cover it with cloth in the night time and in the morning, I had to rush to remove the cloth so

EFFECTIVENESS OF PROJECT

- By growing plants in the park, the greenery in the park was increased, and by seeing this the local neighbourhood of the park also started getting interested in the planting.
- By planting seeds at home, with less space, we get to know that in a small place also we can grow daily use herbs.
- At my friend's garden firstly, there was all weeds due to the rainy season, but when we take initiative, and grow useful flower and herbs his garden become a site to view.

CONCLUSION

- This community development project tells us about the ground level of plantation skills, and the effort required to plant a tree.
- the greenery in the local garden is increasing drastically, as the local people also start taking care of plants.
- my friend was inspired by us, and he also join the NGO for plantation and for contributing towards society.
- In the end, this community development project not only grew our knowledge about the environment and plantation, but also helps us to grow as a responsible citizen of this society.
